

Github Assignment Writeup

Alan Jamieson

Last Updated: 3/8/2021

This assignment counts as a homework. There are two different sets of instructions based on your role.

Group Leaders/Repository Admins:

- 1.) Create the repository using your team's name.
- 2.) Add all team members and Alan as collaborators.
- 3.) Edit README.md to contain your team's name.
- 4.) Wait for pull requests and merge into main.

All other Team Members:

Once the group leader has completed setting up the repository, complete the following steps.

- 1.) Download and install the Github Desktop Client (if using)
- 2.) Clone the repository created by your team lead. (File -> Clone Repository) Make sure you note the local path in the "Clone a repository" window – that will be where your files will be stored.
- 3.) Create a branch and name it with your name. Publish the branch.
- 4.) Go to the README.md file on your machine and add your name. Save the file. Commit to the branch in the Github Desktop Client. Make sure to give a good description!
- 5.) Push to origin.
- 6.) Create a pull request.
